

Environmental Health & Safety Management Information System

U.S. International Tool & Appliance Manufacturer

HRP Associates, Inc. developed a customized computerized Environmental Health & Safety Management Information System (EMIS) for a Reynosa, Mexico facility belonging to an international, multi-facility tool/appliance manufacturer. The requested EMIS module, one of many available from HRP, is designed for the organization, management and access of a corporation's digital Material Safety Data Sheet (MSDS) Library.

This particular system was installed on the client's corporate intranet and accessible to all users, including personnel at the Reynosa facility. All portions of the MSDS Management System, which was originally developed in English, were translated to Spanish.

The project involved the following:

- Researching and collating internal procedures and processes to determine how they would be incorporated into the EMIS.
- Translation to Spanish of the entire EMIS.
- Planning and design coordination with both English-speaking corporate and Spanish-speaking Reynosa facility personnel.
- Customization and installation of the Material Safety Data Sheet management system on the corporate intranet. The MSDS management system is now accessed by all corporate facilities including those in Spanish speaking countries. HRP staff also carried out the image and data entry function for all MSDSs.
