

Environmental Compliance Services

East Coast Hospital and Medical Facilities

HRP Associates, Inc. has conducted numerous environmental compliance projects with this hospital and its properties. These services have included an EPA self-audit and disclosure to EPA and the CTDEP. As part of this audit, HRP reviewed the main hospital and twenty different off-site medical facilities throughout the state that are either owned or leased by these organizations. These facilities were reviewed for their compliance with both state and federal environmental regulations.

As a result of the audit, HRP assisted the hospital in changing their hazardous waste generator status, completed a Hazardous Waste Contingency Plan, conducted Hazardous Waste and Department of Transportation (DOT) trainings, reviewed on-site chemical inventories for extremely hazardous substances, sampled wastewaters for state general permit compliance, and performed air emission calculations.

HRP has also continued to assist the hospital in maintaining their compliance with the environmental regulations by completing various tasks including, but not limited to the following:

- Spill Prevention Control and Countermeasure Plan and updates
- Annual Hazardous Waste Training
- Quarterly and annual wastewater sampling for general permit compliance
- Air Permit Applicability Reviews
- Biennial Hazardous Waste Reports
- Title V General Permit (General Permit to Limit Potential to Emit) Re-registration

Through the hospital's commitment to sustained environmental compliance and quick corrective actions, the hospital has not received any fines associated with the EPA and CTDEP disclosed violations.
